## 大山 卓爾 教授 最終講義

*The world population has increased four-fold during the 20th century from about 1.5 billion to 6.1 billion. At present, the population is consistently increasing in developing countries, and the world population in 2050 is estimated to be 9.0 billion. Therefore, sufficient supply of food to support an increasing population is essential at the global scale.*

*Quotations from Advanced in biology and ecology of nitrogen fixation
